

At the big Stockwell meeting a few weeks ago, several people, upon hearing that there already is a plan for Stockwell, expressed interest in seeing this plan. OK, you asked for it. Here it is:

If this looks to you like it was drawn using crayons, well...you're wrong! We didn't use crayons to draw our plan; we were much more sophisticated than that. Give us some credit!

Ahem. We used colored pencils.

In our defense, this map (currently hanging in the APC Conference room—we snapped a close-up of Stockwell using an iPhone) was developed in 1981 when desktop computers were few and far between. Other than the absence of Cole Elementary School, it's remarkably similar to the existing land use today. The other major change between 1981 and today is, of course, the presence of the Stockwell sewer district. The map has five current and expected land uses shown: medium density residential; light commercial; recreational & open space; select agriculture (where prime farmland exists); and regular agricultural. This is the map we are working on updating with your help.
